

Syntax ↓ if condition 1;

code block to be executed if condition is true.

Statement 1

Statement 2

elif condition 2;

code block to be executed if condition is false & condition 1 is false & condition 2 is true.

Statement 3

Statement 4.

else

code block to be executed if all conditions are false

Statement 5

Statement 6.

* The elif statement allows you to check additional conditions after the initial 'if' statement

* If the first condition is false, it moves on to the next 'elif' statement & checks its condition.

* If that condition is true, the corresponding code block is executed.

* This process continues until either a condition is true or there are no more 'elif' statements.
